; Sequence 96, Application US/09060872A
; Sequence 96, Application US/09060872A
; Patent No. 683550
; GENERAL INFORMATION:
; APPLICANT: Estell, David
; APPLICANT: Harding, Fiona
; TITLE OF INVENTION: MUTANT PROTEINS HAVING LOWER ALLERGENIC RESPONSE IN
; TITLE OF INVENTION: HUMANS AND METHODS FOR CONSTRUCTING, IDENTIFYING AND
; TILLE OF INVENTION: PRODUCING SUCH PROTEINS
; FILE REFERENCE: GC527
; CURRENT FILLING DATE: 1998-04-15
; NUMBER OF SEQ ID NOS: 211
; SOFTMARE: Patentin Ver. 2.1
; SEQ ID NO 96
; LENGTH: 15
; TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                              LENGTH: 15
TYPE: PRT

             Sequence 96, Application US/09677822A

Patent No. 6936249

GENERAL INFORMATION:
APPLICANT: Estell, David
APPLICANT: Harding, Fiona
TITLE OF INVENTION: METHODS OF MAKING AN ALTERED IMMUNOGENIC RESPONSE AND
TITLE OF INVENTION: METHODS OF MAKING AND USING THE SAME
FILE REFERENCE: GC527C2
CURRENT FILING DATE: 2000-10-02
PRIOR APPLICATION NUMBER: US/09/677,822A
CURRENT FILING DATE: 2000-02-08
PRIOR FILING DATE: 2000-00-08
PRIOR FILING DATE: 2000-00-08

ALIGNMENTS

#### 19-MAY-2003; 2003EP-00011334 07-JAN-2004. EP1378521-A1. antibody; carbohydrate-deficient transferrin; CDT; non-glycosylated transferrin; alcoholism; alcoholic; diagnosis; human. Human CDT peptide fragment 25-MAR-2004 ADG46078; ADG46078 standard; peptide; 13 sapiens. (first entry) #4. \$

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

BEHRING MARBURG GMBH

Claim 4; SEQ ID NO 4; 21pp; German.

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences vVARSNGGKEDLIWELL, TTEDSTAKIMNGEADAWSLDGGF, SKLSWGSGLINLSERN and YEKYLGEEYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated rransferrin or a fragment than general ton of hybridomas by standard transferrin or a fragment than convertions of without the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the s transferrin, or a fragment, of spleen and agment, then generation of hybridomas by standard myeloma cells. Hybridomas are then selected for

 production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, which lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
 The present sequence is a portion of the human transferrin (Tf) C don comprising amino acids 611-659 of the Tf sequence given in ABP72820. invention relates to novel fusion proteins of Tf and a therapeutic protein or peptide. The therapeutic protein or peptide, e.g. an erythropoletin mimetic (see ABP72834), can be fused to the N- or C-terminus of Tf, or inserted into Tf especially between residues Glu-6
 New fusion protein, useful in the diagnosis and treatment of diseases or disorders relating to the respiratory, cardiovascular and digestive systems, comprises a transferrin protein fused to a therapeutic protein.

This invention relates to a novel fusion protein which comprises a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region. The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present

 The invention comprises a fusion protein that contains a modified transferrin (Tf) protein fused to a therapeutic protein/peptide (e.g. beta-interferon - IFN, glucagons-like peptide - GLP-1, erythropoietimimetic peptide - EMP1, T-20 and soluble toxin receptor). The fusior protein of the invention is useful for epitope tagging. The present acid sequence represents a fragment of the human Tf protein.

 This invention relates to a novel nucleic acids, and encoded polypeptides thereof, which have properties related to the stimulation of biochemical CC thereof, which have properties related to the stimulation of biochemical CC Specifically, it refers to the use of biologically active fragments for CC diagnostic and prognostic assays and furthermore in the treatment of CC diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their CC expression using antisense oligos, ribozymes and peptide nucleic acids. CC manufacture of a medicament for treating metabolic disorders, diabettes, anorexia, cancer, cardiovascular, infectious, neurodegenerative, immune CC and haematopoietic diseases as well as various dyslipidaemias.

CC virucide, nootropic, antiinflammatory, neuroprotective, antilipaemic, CC virucide, nootropic, antiinflammatory, neuroprotective, antilipaemic, condentify small molecules that modulate or inhibit, for example, conditions and acadisant. Furthermore, they are useful in screening assays to identify small molecules that modulate or inhibit, for example, conserving and anylogenesis. The nucleic acids are also used as in chromosome mapping, tissue typing, preventive medicine and convention.

 밁
 The present sequence represents human transferrin polypeptide.

Transferrin polypeptides and polynuclectides are used to prevent, treat
or ameliorate a medical condition in e.g. humans, mice, rabbits, goats,
horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or
treated include autoimmune diseases e.g. rheumatoid arthritis,
hyperproliferative disorders e.g. copplasms of the breast or liver,
cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders
e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g.
Alzheimer's disease, infections caused by bacteria, viruses and fungi and
coular disorders e.g. corneal infection. The polypeptides can also be
used to aid wound healing and epithelial cell proliferation, to prevent
skin aging due to sumburn, to maintain organs before transplantation, for
supporting cell culture of primary tissues, to regenerate tissues and in
chemotaxis. The polypeptides can also be used as a food additive or
preservative to increase or decrease storage capabilities

 Ś
 CC (ACEV) polypeptide. The polypeptides of the invention include variants of CC granulocyte colony stimulating factor receptor, glucagon, interleukin 6, CC platelet-derived endothelial cell growth factor, cyclin-dependent kinase CC inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal CC polypeptide receptor 2. The polypeptides and their associated nucleic CC candidate compounds capable of binding the molecules. The sequences of CC candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various CC disorders including cardiovascular diseases such as arteriosclerosis, CC myocardial infarction and coronary arterial thrombosis, renal diseases CC such as diabetic nephropathy, muscular diseases such as hypertrophy, CC immune disorders such as immune complex nephritis, multiple sclerosis, CC cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as abestosis and vascular pathologies involving an endothelial CC abnormality such as deep vein thrombosis

 S
 The invention relates to novel human metalloproteins (MEPR) and encoding CC polynucleotides. The human MEPR polypeptides, polynucleotides and cc modulators are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MEPR, particularly cell CC proliferative disorders (e.g. arteriosclerosis, atherosclerosis, pepatitis, paroxysmal nocturnal hemoglobinuria, polycythemia CC cirrhosis, hepatitis, paroxysmal nocturnal hemoglobinuria, polycythemia CC vera, psoriasis, primary thromobocytopenia or cancer), developmental CC disorders (e.g. renal tubular acidosis, anemia or mental retardation), CC neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. AIDS, allergies, CC asthma, autoimmune/inflammatory disorders (e.g. AIDS, allergies, CC diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, GC disbetes mellitus, glomerulonephritis, Goodpasture's syndrome, CC diabetes mellitus, osteoporosis, pancreatitis, Reiter's Syndrome, rheumatoid arthritis, osteoporosis, pancreatitis, or viral, CC syndrome, rheumatoid arthritis, Sjogren's syndrome, uveitis, or viral, CC bacterial, fungal, parasitic, protozoan or helminthic infections. The CC polymacleotides encoding MEPR are useful for creating transgenic animals CC to model human disease. Sequences ABR82316-323 represent the human MEPR

 The invention relates to novel diagnostic and therapeutic polynucleotides celected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human conditions diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, associated autoimmune/inflammatory disorders, gastrointestinal disorder, endocrine confidence of the conditions caused by virus, bacteria, fungi or parasite. The dithp conditions caused by virus, bacteria, fungi or parasite. The dithp conditions caused by virus, bacteria, fungi or parasite. The dithp conditions caused by virus, bacteria, fungi or parasite. The dithp conditions caused by virus, bacteria, fungi or parasite. The dithp conditions caused by virus, bacteria, fungi or parasite. The dithing conditions also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this pattent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

 The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorders, or CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the convention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly cc from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The invention relates to novel human metal binding proteins (MBP) and encoding polynucleotides. The MBPs can be expressed by standard recombinant methodology. The polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of MBP, such as cell

FO
 CC proliferative (e.g. cancer, atherosclerosis), neurological (e.g. AIDS, CC epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, CC allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) CC disorders, or infections. These are also useful in assessing the effects CC of exogenous compounds on the expression of nucleic acid and amino acid CC sequences of MBP. The MBP or its fragments are useful in screening CC compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds CC that specifically bind to or modulate the activity of the polypeptide. An CC microarray comprising different nucleotide molecules affixed at distinct CC physical locations on a solid substrate, where at least one nucleotide completes affirst oligonucleotide or polynucleotide sequence CC specifically hybridizable with at least 30 contiguous nucleotides of the carget polynucleotide is useful in monitoring or measuring proteinfunction interactions, drug-target interactions, and gene expression

 RESULT 15
 CC selected from one of the 2722 sequences defined in the specification. A CC polynuclootide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC autoimmune/inflammatory disorder; developmental disorder, endocrine CC disorder, neurological disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parastre. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm

CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders.
CC autoimmune/inflammatory disorder, developmental disorder, endocrine CC disorder, neurological disorder, developmental disorders, endocrine CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide coplymorphisms, as molecular weight markers, and for somatic or germline CC invention. Note: The sequence atta for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

 FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.
 Crystallogr. B 46:763-771(1990) FUNCTION: Transferrins are iron

 Iron;
 -
 Conneely O.M.
 "Nucleotide
 SUBCELLULAR LOCATION: Secreted protein.
MISCELLANEOUS: The second peptidase S60 domain does not protease function as the catalytic residues are missing.
SIMILARITY: Belongs to the transferrin family.
SIMILARITY: Contains 2 peptidase S60 domains.
 FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate.

FUNCTION: The lactotransferrin peptidase S60 domain 1 functions as a serine protease that cuts arginine rich regions. This function contributes to the antimicrobial activity (By similarity).

CATALYTIC ACTIVITY: Preferential at -Arg-Ser-Arg-|- and -Arg-Arg-Ser-Arg-|- and of z-Phe-Arg-|-aminomethylcoumarin.

SUBUNIT: Monomer
 t protein sequencing; Glycoprotein; Hydrolase; Ion transport;
Iron transport; Metal-binding; Protease; Repeat;

 CONTRIBUTES to the antimicrobial activity (By similarity). CATALYTIC ACTIVITY: Preferential at -Arg-Ser-Arg-Arg-|- at Arg-Ser-Arg-|-, and of Z-Phe-Arg-|- aminomethylcoumarin. SUBUNIT: Monomet (By similarity).

SUBCELLULAR LOCATION: Secreted protein.
MISCELLANBOUS: The second peptidase $60 domain does not he protease function as the catalytic residues are missing. SIMILARITY: Belongs to the transferrin family.

SIMILARITY: Contains 2 peptidase $60 domains.

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSWGGKEDLIVELL, TTEDSIAKINNOSADAMSLDGGF, SKLSWGSGLNLSERN and YEKYLGERYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

WPI; 2004-073743/08.

 The invention relates to a method of managing, treating or ameliorating a respiratory infection or its symptom in a human subject by administering an interleukin-9 (II-9) antagonist. The method further comprises administering to the subject an anti-respiratory syncytial virus (anti-RSV) antigen antibody. The anti-RSV antigen antibody is palivizumab. The method further comprises administering a leukotriene modifier, which is montelukast, zafirlukast, pranlukast or zileuton. Also disclosed are: a method of preventing the development, onset or progression of asthma or one or more asthma-like symptoms in a child, a method of preventing, managing, treating or ameliorating wheezing in a pre-term infant, infant or child, a method of preventing, managing, treating or ameliorating wheezing in a human subject, and a method of preventing, managing, treating or ameliorating wheezing in a human subject, and a method of preventing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, managing, mana
 Managing, infection syncytial
 production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, whic lacks glycosylation at AssAll and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.

 This is the amino acid sequence of the human regeneration-associated serpin-1 peptide (RASP-1), used in the method of the invention to develop products for the diagnosis and treatment of liver conditions. The RASP-1 polypeptides are involved in regeneration of the liver and are useful in the diagnosis, prognosis and treatment of liver-associated disorders, such as viral infection, autoimmunity, hepatitis or cirrhosis. They can also be used in methods for maintaining cultured cells or tissues, such as hepatocytes cells or tissues, prior to transplantation. In addition, RASP-1, can be used to promote hepatocyte growth in vitro, in order to, e.g. facilitate production of growth factors, such as hepatocyte growth factors, such as hepatocyte growth factors (HGF), that are produced by them. The regulatory region of RASP-1 allows tissue-specific expression (i.e. liver) of an operatively linked

 fragmentation of a polypeptide or protein; determining a first physico-
c chemical property other than mass or mass to charge ratio of the
molecules comprising peptides; and optionally determining a second,
third, fourth and/or fifth physico-chemical property of the molecules
cc comprising peptides; and a mass spectrometer comprising a mass analyser
cc for accurately determining the mass to charge ratio of the first
cc molecules, and means for identifying the first molecules of the basis of
at least the first physico-chemical property and the accurately
cd determined mass to charge ratio of the first molecules and optionally on
the basis of the second, third, fourth and/or fifth physico-chemical
cc property. The method and spectrometer are useful in protein
dentification, protein quantitation, proteases, high-resolution mass
spectrometry, proteomics, genomics and bioinformatics. This sequence
represents a peptide from an indexed peptide database created by the
created and spectrometry method of the invention.

 The epitope is admixed or joined to a CTL or HTL epitope. The epitope is bound to an HLA molecule on the antigen-presenting cell, where when an A2 restricted cytotoxic lymphocyte (CTL) is present, a receptor of the CTL binds to a complex of the HLA molecule and the epitope. Specifically claimed are peptides having allele-specific binding motifs for HLA. The compositions and methods are useful for preventing, treating or diagnosing viral diseases and cancer. The peptide epitopes are useful as diagnostic agents for evaluating immune responses, for making antibodies and for evaluating efficacy of a vaccine. Sequences given in ADW29251-ADW37745 represent epitopes of the invention as given in Tables 2-31.

 The sequences given in AAW21201-560 represent hydrophilic signal oligopeptides. These signal oligopeptides are localised on the surface of the protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids arranged with neutral spacer amino acids. The specific signal character of these oligopeptides is determined by a characteristic combination of conformation and charge within the signal sequence. These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to blocking its specific signal sequences, or as therapeutic agents to function as feedback regulators to reduce synthesis rate of a selected protein. These peptides may be modified by omitting one or more amino acids at the N- and/or C-terminal, by substituting one or more amino acids with amino acid residues with similar charge and/or polarity, by omitting one or more amino acids with amino acid residues with similar charge and/or polarity, by omitting one or more amino acids or a combination of these

Managing, treating or ameliorating in a human subject a respiratory infection or its symptoms caused by bacteria, fungi or respiratory syncytial virus by administering an IL-9 antagonist.

Disclosure; SEQ ID NO 12; 276pp; English

Crespiratory infection or its symptom in a human subject by administering a crespiratory infection or its symptom in a human subject by administering can interleukin-9 (IL-9) antagonist. The method further comprises can anti-respiratory syncytial virus (anti-key) antigen antibody. The anti-RSV antigen antibody is palivizumab. The method further comprises administering a leukorriene modifier, which is method of preventing the development, onset or progression of asthma or one or more asthma-like symptoms in a child, a method of preventing, cansaing, treating or ameliorating wheezing in a pre-term infant, infant or child, a method of preventing, managing, treating or ameliorating method of preventing, managing, treating or method of preventing, managing, treating or method of preventing, managing, treating or method rection comprises administering an IL-9 antagonist.

Crespiratory infection comprises administering an IL-9 antagonist. The comprises administering an IL-9 antagonist. The contaminatory agent, an anti-viral agent, an anti-breapy that is not administering wheezing in a human subject comprises administering an IL-9 antagonist. "Leishmania chagasi: The alpha-tubulin intercoding region results in constant levels of mRNA abundance despite protein synthesis inhibition
 MOD_RES
 -I- FUNCTION: Has antibacterial activity against Gram-
Gram-positive bacteria.
-I- SUBCELLULAR LOCATION: Secreted protein.
-I- TISSUE SPECIFICITY: Expressed by the skin glands.
-I- SIMILARITY: Belongs to the frog skin active pepti-
Brevinin subfamily.
